- Hidden wiring that's ready for future technologies
 - Convenient outlets and controls for audio, video, telephones, Internet and lighting
 - Simplified remote control

Home audio and video done your way

By a company you can trust to do it right and back it up

How do you choose a company to design and install your home theater or multi-room audio/video system? How can you be sure you're working with someone you can trust? Look for two things — a long history of impeccable customer service and CEDIA Certification.

A Charlottesville company founded in 1974, Crutchfield is one of the largest direct sellers of consumer electronics in the U.S. Now Crutchfield brings its big-league resources and legendary customer care to your home or commercial audio/video installation. Crutchfield's CEDIA-certified personnel are proven experts who are committed to the highest standards of knowledge and professionalism.

TV Installation

Flat-panel on your wall

The dream of hang-on-the-wall TV is finally a reality. Hanging one, however, is not a simple matter. You'll need expert help choosing the right screen size and the right place to hang it. Leave the complicated mounting job to our experienced installers.

HDTV – the future is now

Ready to take the HDTV plunge? We'll make sure you understand what's involved and then get you lined up with everything you need to receive, display and even record those amazing high definition pictures.

Home theater projector

For a true theater experience at home, nothing beats a giant picture from a TV projector. We can install the projector on the ceiling and put in a motorized screen that disappears when the movie is over.

High fidelity with a low profile

Gear is concealed

Great sound and crystal clear pictures, yes. Ugly stack of dust-catching components with a rat's nest of dangling cables, NO! Your components can be concealed behind closed doors and controlled by a single, user-friendly remote.

Wires are hidden

Speakers can go inside your walls or ceilings, painted to match your decor. TVs can be hung on your walls or recessed into your cabinetry. Think of all the floor space you'll save. Imagine all the eyesores gone.

Space is used efficiently

The key is to treat your home entertainment system as an important household amenity, not an afterthought to your otherwise meticulously planned living spaces. The pros at Crutchfield can help you visualize the possibilities.

A solution for every space

Family Room

Big screen excitement in the family room, with surround sound that puts you right in the middle of the action.

Kitchen

Spend a lot of time in the kitchen? Make it quality time. Enjoy the morning TV news with your coffee. Or play some tasty music while you cook up a gourmet dinner.

Outdoors

Entertaining al fresco? Or just relaxing on your deck? Music from your weatherproof speakers makes the fresh air even more refreshing.

Home Office

The right kind of Internet and phone connections are a must in your work-space. But how about a computer monitor that also displays TV shows? Or a networked photo printer? What if you could pipe the music files on your computer to speakers throughout your home?

Master Bedroom

In the master bedroom, a simple but elegant table radio may be all you need. Or you could opt for a multi-room audio system that lets you listen to music or monitor the baby's room. A wall-mounted flat panel TV replaces the bulky tube-type set on your dresser.

Master Bathroom

Music in your master bathroom helps you soak your stress away. Put a moisture-resistant speaker or two in your ceiling and an audio system controller in the wall.

We make it easy for all to use!

The installation is not complete until you can easily operate your system. We make it as simple as possible by programming a single

remote to replace the remotes that came with your components. Push one button to “Play Video” or “Play Music” and all of the components involved in that activity do their thing. You can even dim the lights from your remote.

Tech support for life

You can speak with a Crutchfield technical advisor from 8 a.m. to midnight, 7 days a week (even when the store is closed). If a troubleshooting phone call doesn't fix the problem, we'll schedule a house call.

Step 1 – your free consultation

Before we talk about gear, we lend you our ear. The quality and user-friendliness of your Crutchfield installation reflect the trust and understanding we develop with you. It begins with a meeting at our Rio Hill design center or a tour of your home. Detailed plans can be provided for a fee.

We will work with your builder

Building a new home? You have the opportunity to wrap the cost of your whole-house audio/video system into your mortgage. We will work closely with your builder to integrate A/V system installation into the wiring plan and construction schedule.

Let's get started!

In Charlottesville, call Keith Christiansen, custom home consultant, at 434-817-1111 or visit our Rio Hill Store.

In Harrisonburg, call Matt Kennedy at 540-434-1000 or visit our store in the Market Square East shopping center.
